Data Completeness Report

Notes: (1) Variables are individually listed only if they have greater than 5% missing data. These variables are listed under the appropriate percentage category in the order in which they appear in the data file. (2) The Data Completeness Report only captures information about system missing or other values that are declared missing. Codes that have a label implying that they are missing but that are not declared missing values are not reflected in this report. Data users should consult the codebook for more specific information about missing values. (3) Some variables that have 100% missing data may have been blanked by ICPSR to protect respondent confidentiality. Data users should consult the codebook for more specific information about blanked variables. (4) Data do not contain skip patterns or skip patterns are not reflected in the data as coded.

Table 1: Distribution of Variables by Percentage of Missing Values--1950 Social and Demographic Data

Variable Name and Label (Total Cases = 826)		Percent of Cases with Missing Values
25.2% (30 of 119 variables)	have 0% Missing Values	
70.6% (84 of 119 variables)	have 0% - 1% Missing Values	
1.7% (2 of 119 variables)	have 1% - 3% Missing Values	
0.0% (0 of 119 variables)	have 3% - 5% Missing Values	
0.8% (1 of 119 variables)	have 5% - 10% Missing Values	
RCAT1952	Members of Roman Catholic congregations in 1952	7.6%
0.0% (0 of 119 variables)	have 10% - 20% Missing Values	
0.0% (0 of 119 variables)	have 20% - 40% Missing Values	
0.0% (0 of 119 variables)	have 40% - 99% Missing Values	
1.7% (2 of 119 variables)	have 100% missing values	
NAME	County name	100%
UNFIPS	State + county identifier	100%

Great Plains Population and Environment Data: Social and Demographic Data, 1870-2000 [United States]

Myron P. Gutmann, Principal Investigator

Study Description

Introduction

The data in this series of studies were collected by an interdisciplinary research team between 1995 and 2004, as part of a research project funded by the National Institute of Child Health and Human Development (Grant Number R01 HD33445 to the University of Michigan). The goal of the project was to collect information about approximately 500 counties in twelve states of the Great Plains of the United States, and then to analyze those data in order to understand the relationships between population and environment that existed between the years of about 1870 and 2000.

The original conceptualization of the project was to study counties, so the data distributed here are all data about counties. The data fall into four broad categories: about the counties, about agriculture, about demographic and social conditions, and about the environment. The information about counties (name, area, identification code, and whether we classified the county as part of the Great Plains in a given year) are embedded in each of the other data files, so that there will be three series of data (agriculture, demographic and social conditions, and environment), with individual data files for each year for which data are available. As the data are finalized for release, we are making them available to the research community as part of a series entitled "Great Plains Population and Environment Data." The Investigators intend to make all the data they have collected available for public use, subject to the conditions imposed by the original sources of the data.

The Counties

The Great Plains are part of the great natural grassland that stretches across the central part of North America eastward from the Rocky Mountains. We define its boundaries primarily in terms of natural conditions. We set its boundaries on the east at the line of 700 mm of average annual precipitation, and on the west at 5,000 feet of elevation. We bound the Great Plains on the north at the Canadian border and on the south in Texas and New Mexico at the 32nd parallel. Much of the Great Plains is a high plain, more than 2,000 feet above sea level and sloping ever upward as it moves west. The counties of the Great Plains share some environmental characteristics, but because of their range of soil, temperature, precipitation and elevation, are also quite different from each other. The southern plains and the northern plains are not the same; nor are the eastern and western Great Plains. What these sub-regions share is the flat or slightly rising treeless expanse that must have greeted all early visitors, and the preponderance of grasses in their natural vegetation. The result of our selection procedure is a set of about 500 counties (in recent years) in Montana, Wyoming, Colorado, New Mexico, North Dakota, South

Dakota, Nebraska, Kansas, Oklahoma, Texas, Minnesota, and Iowa that share a number of environmental characteristics while retaining a considerable amount of diversity.

The project has collected data for all counties within these twelve states (approximately 1010 in recent years). The data files (for agriculture, for demographic and social conditions, and for environment) list each county in each year for which we have collected data, by name and by state and county Federal Information Processing Standards (FIPS) 6-4 Codes¹, the geographic area of the county, and whether the county falls within the boundaries of the Great Plains as we have defined them.

Social and Demographic Data

The social and demographic data included in this Series consists of a single data file for each decennial year between 1870 and 2000, and they cover 10 of the 12 Great Plains states (excluding Minnesota and Iowa). Information on a variety of social and demographic topics were gathered to historically characterize populations living in counties within the U.S. Great Plains, in terms of: urban, rural, and total population; vital statistics; net migration; age and sex; nativity and ancestry; education and literacy; religion; industry; and housing and other.

These data include selected material compiled as part of the U.S. Population Census. The U.S. Census of Population and Housing has been conducted since 1790 on a regular schedule that is decennial. The county-level social and demographic data produced by the U.S. government as part of the Census constitute a remarkable and consistent series of measures capturing changes in the U.S. population's size, composition, and other characteristics. A subset of the variables available from the short and long-form survey questionnaires of the U.S. Census of Population and Housing (as compiled for counties) were extracted from previously existing digital files (ICPSR Study No. 3, ICPSR Study No. 20, ICPSR Study No. 13285, ICPSR Study No. 13402, ICPSR Study No. 8493, ICPSR Study No. 8697, 1980-1990 Components of Change, 1990 Census of Population and Housing – Summary Tape File 3).

Besides the decennial census of the population, data were also drawn from an assortment of existing digital files as well as sources that were manually digitized. This study's data includes compilations of county-level information gathered from various federal agencies and private organizations as well as the agriculture and economic censuses: *County Statistics File-3* (ICPSR Study No. 9168), *USA Counties 1996*, and *County and City Data Books* (ICSPR Study No. 7736). Supplementing these compilations, this project manually digitized information from the *Consumer Market Data Handbook*. Collected in the *Census of Religious Bodies* and the *Survey of Church Membership*, data about religious affiliation was also drawn from existing digital files (ICPSR Study No. 8,

¹ For a description of the FIPS 6-4 Codes, see <http://www.itl.nist.gov/fipspubs/fip6-4.htm>. For counties dissolved before FIPS codes were implemented, we used a combination of codes created by the HUSGO project and codes created by the Great Plains Project. We followed the geography used by the Census Bureau, and also assigned new codes to counties that were substantially different geographic areas than in later censuses.

ICPSR Study No. 14, ICPSR Study No. 7520). Finally, information about births, deaths, marriage, and divorce were manually digitized for selected variables from volumes from *Vital Statistics of the United States*.

All the sources used are listed later in this document. We also list digital versions of the data where they exist. Some of these are part of the ICPSR collection, while others are not.

We have attempted to give the variables consistent names, as shown in the documentation for these files. It is important for data users to recognize that there are sometimes significant but subtle differences between what may appear to be the same variable in two different census years. Where possible our technical documentation emphasizes those differences, but to be certain the data user may need to do his or her own exploration into the sources.

Missing Values

Virtually all the data in the Great Plains Population and Environment database are drawn from published tabulations of administrative and survey data at the scale of the U.S. County. In the database, some of those data are characterized as “missing,” and assigned to one of the categories identified in this table. There are two reasons why data may be missing for a given variable for a given county in a given year. First, the county might not yet have been created at the time of that census, or the Census Bureau (or other data producer) might have combined two or more counties into a single tabulation unit for a specific publication. Second, data are missing because there has been some problem in reproducing them, either because the original publication is illegible, or because we have constructed them from multiple sources and one or more of those sources is itself missing.

The research team that produced these data has maintained the fine grain of different types of missing data because we believe that the different kinds of missing data reveal important information that may be useful in their analysis.

Missing values frequencies are not included the summary statistics in the following codebook. They will be found in the data files as negative values. All negative values in the datasets are missing values. Missing values have been coded according to the table on the next page.

Missing Value Coding

Code	Explanation
-1	Data not applicable*
-2	Data not available* Data not available (not reported, schedules destroyed, information lost, etc.)
-3	Less than half of the unit shown*
-4	Withheld for privacy. Withheld to avoid disclosing data for individuals.*
-5	Data not published for this state or county**
-7	Data included in "all other"*** In some tables, not all counties were explicitly tabulated. Those that were not constituted as separate unit, labeled "All Other."
-8	Data illegible in published volumes
-9	Data has special problems (see footnote in original source)**
-10	Data included under another entry (combination of two or more variables, etc.) These variables are set off by brackets in the published tables.
-11	Data recorded under another political unit
-13	Sum of missing values. Variable is the sum of variables where the value is missing for all components. This flag appears only as a result of programming.**
-14	Result of merge. Variable is not available or was not collected for this unit, but appears in master data files as the result of merging multiple files. This flag appears only as a result of programming.**
-15	Sum with missing value(s). Variable is the sum of other variables, where the value is missing for one or more of the components. This flag appears only as a result of programming.**
-9,999,999	Data not published for this state or county** Assigned only to "Total net migration estimate" variable (MIGRAT) since data has valid negative values within the range of -1 and -67,545.

	**Great Plains Project

Sampling

Data drawn from the *Consumer Market Data Handbook*, the *Census of Religious Bodies*, the *Survey of Church Membership*, and *Vital Statistics of the United States* are not collected from a sample. Details of data collection procedures for religion and vital statistics information are available from the American Religion Data Archive (<http://www.thearda.com>) and the U.S. Department of Health and Human Services [Report (PHS) 97-1003, 1997].

However, the *U.S. Census of Population and Housing* collects some information from samples of persons and housing units. The following discussion summarizes the sampling methodology used in the U.S. Population Census from 1870 to 2000 (U.S. Department of Commerce, April 2002):

2000

UNIVERSE: All persons and housing units in the United States.

SAMPLING: Every person and housing unit in the United States was asked basic demographic and housing questions, for example, race, age, relationship to householder, housing unit vacancy status, and housing unit tenure. A sample of these people and housing units was asked more detailed questions about items, such as income, occupation, and housing costs. The sampling unit for Census 2000 was the housing unit, including all occupants. There were four different housing unit sampling rates: 1-in-8, 1-in-6, 1-in-4, and 1-in-2 (designed for an overall average of about 1-in-6). The Census Bureau assigned these varying rates based on pre-census occupied housing unit estimates of various geographic and statistical entities, such as incorporated places and interim census tracts. For people living in group quarters or enumerated at long-form eligible service sites (shelters and soup kitchens), the sampling unit was the person and the sampling rate was 1-in-6.

1990

UNIVERSE: All persons and housing units in the United States.

SAMPLING: A sample of persons and housing units was asked more detailed questions about such items as income, occupation, and housing costs in addition to the basic demographic and housing information. The primary sampling unit for the 1990 census was the housing unit, including all occupants. For persons living in group quarters, the sampling unit was the person. Housing units in governmental units with a precensus (1988) estimated population of fewer than 2,500 persons were sampled at 1-in-2. Housing units in census tracts and block numbering areas (BNA's) with a precensus housing unit count below 2,000 housing units were sampled at 1-in-6 for those portions not in small governmental units (governmental units with a population less than 2,500). Housing units within census tracts and BNA's with 2,000 or more housing units were sampled at 1-in-8 for those portions not in small governmental units. Persons in group quarters were sampled at a 1-in-6 rate.

1980

UNIVERSE: All persons and housing units in the United States.

SAMPLING: For the STF3 one-half of all housing units and persons in group quarters in incorporated places of less than 2,500 persons were included in the sample. In all other places, one-sixth of the housing units or persons in group quarters were sampled. When both sampling rates were taken into account, approximately 19 percent of the nation's housing units were included in the census sample.

1970

UNIVERSE: All persons and housing units in the United States.

SAMPLING: The housing unit was the sampling unit. For the sample data, some questions were asked of 5% of the population, some of 15% and some of both (constituting a 20% sample for those questions).

1960

UNIVERSE: All persons and housing units in the United States.

SAMPLING: The sample data population questions were asked of 25% of the population. For the housing sample data, some questions were asked of 5% of the population, some of 20% and some of both (constituting a 25% sample for those questions).

1950

UNIVERSE: All persons and housing units in the United States.

SAMPLING: The person was the sampling unit in 1950. The sample data collected population and housing information for 20% of the population.

1940

UNIVERSE: All persons and housing units in the United States.

SAMPLING: The person was the sampling unit in 1940. The sample data collected information from 5% of the population.

1870-1930

SAMPLING: No sampling.

Linking Instructions

To compile time-series data, it is necessary to merge selected period files by each county's unique identifier (UNFIPS). While UNFIPS designates roughly the same geography over time, the data user will want to conduct further research before aggregating counties across time.

Inconsistent Values

Nine (9) indicators of age-distributions (i.e., total number of persons age 5 and over, 5 to 19, 5 to 34, under age 10, 10 and over, 10 to 14, 20 to 24, 25 to 29, and 25 and over) are provided as "Education and Literacy" variables. These age-distributions can also be derived from our "Age and Sex" variables. When comparing these measures, inconsistent values may be found since these data are drawn from different sources. These sources differ in their processing procedures, resulting in variation in population estimates.

Describing differences in processing procedures across data sources, data from *Net Migration of the Population of the United States by Age, Race and Sex, 1950-1970* (ICPSR Study #8493) is adjusted to address the undercount of specific populations. Furthermore, interpolated data for 5-year age-groups created from the Great Plains Project will sometimes have inconsistent values when compared to its original data source *Historical Demographic, Economic and Social Data: The United States, 1790-1970* (ICPSR Study #3). This is either due to rounding error or the estimation of values for missing original data. Finally, hand-entered data from *Demographic Characteristics of the Population of the United States, 1930-1950: County-Level* (ICPSR Study #20) was extensively cross-checked but some error still remained.²

² As described on page 2 of the codebook for ICPSR Study #20, "In the checking of state totals, the county data were corrected until all discrepancies between the state sums and the state totals which were of a magnitude greater than three were eliminated. In view of the high cost of the hand-checking involved, however, the original researchers that there was little to be gained by continuing until all such discrepancies were removed. At most, this form of error still affects only about 1,000 of the more than 800,000 numbers in the data set.

Acknowledgements

These data files were produced with financial support from the National Institute of Child Health and Human Development through Grant No. R01 HD33554, as well as local funds provided by the Inter-university Consortium for Political and Social Research and by Southwest Minnesota State University.

A large number of individuals contributed to the production of these data. I especially wish to thank

Susana Adamo, Geoff Cunfer, Betsy Guzman, Michelle Butler, Delia Hagen, Eric Johnson, Susan Hautaniemi Leonard, William Myers, Andrés Peri, Sara Pullum, Kenneth Sylvester, and Kristine Witkowski

Social and Demographic Data Codebook

Contents:

Variable Codebook Pages

Data Codebook

Variable Codebook Pages provide a description of each variable in terms of its compilation across all periods of the time-series, including:

- Variable name
- Brief variable description (which also serves as the variable label)
- Availability
- Data source(s)
- Full description from the original sources
- Variable code
- Notes
- Universe

Data Codebook provides additional information for each variable as it was compiled for a given period within the time-series, including:

- Variable name
- Brief variable description (which also serves as the variable label)
- Data source
- Universe
- Notes
- Location within file, variable length and type, and missing codes
- Summary statistics

Source Description:

AG (1870) = Land area, square miles. Atlas GIS map files

IC-3 (1880) = Land area (acres). Tenth Census of the United States, 1880 - The Area of the United States.

AG (1890) = Land area, square miles. Atlas GIS map files

IC-3 (1900) = Approximate land area (acres). Table 92. Twelfth Census of the United States, 1900, Abstract

IC-3 (1910) = Approximate land area (acres). Table 1.--Farms and Farm Property, by Counties: April 15, 1910. Thirteenth Census of the United States, 1910 - Vol. VI & VII.

IC-3 (1920) = Approximate land area (acres). County Table 1.--Farms and Farm Property, 1920, With Selected Items for 1910 and 1900. Fourteenth Census of the United States, 1920 - Vol. VI, Agriculture.

IC-3 (1930) = Approximate land area (acres). County Table I.--Farms and Farm Acreage, 1930, 1925, and 1920, and Crop Land Harvested, 1929 and 1924, by Color and by Tenure of Farm Operator. Fifteenth Census of the United States, 1930 - Agriculture, Vol. II.

IC-3 (1940) = Approximate land area (acres). County Table I.--Farms, Farm Acreage, and Value, by Color of Operator, 1940, 1935, and 1930; Farm Land According to Use, 1939, 1934, and 1929; and Value of Buildings and Implements and Machinery, 1940 and 1930. Sixteenth Census of the United States: 1940 - Vol. I.

IC-3 (1950) = Approximate land area (acres). County Table 1.--Farms, Acreage, Value, and Farm Operators: Censuses of 1950 and 1945. United States Census of Agriculture: 1950--Vol. I.

- ERS (1960) = Approximate land area (acres). County Table 1.--Farms, Acreage, and Value: Censuses of 1959 and 1954. U.S. Census of Agriculture: 1959 Final Report--Vol.1.
- ERS (1970) = Approximate land area (acres). Table 1. Farms, Land in Farms, and Land Use: 1974 and 1969. United States Census of Agriculture, 1974 - Vol. I.
- AC92 (1980) = Approximate land area (acres). TABLE 6. FARMS, LAND IN FARMS, VALUE OF LAND AND BUILDINGS, AND LAND USE. Census of Agriculture, 1982 - Geographic Area Series: State and County Data Files.
- AC92 (1990) = Approximate land area (acres). TABLE 6. FARMS, LAND IN FARMS, VALUE OF LAND AND BUILDINGS, AND LAND USE. Census of Agriculture, 1992 - Geographic Area Series 1B: U.S. Summary and County Level Data. Electronic Files on CD-ROM.
- AC97 (2000) = Approximate land area (acres). TABLE 6. FARMS, LAND IN FARMS, VALUE OF LAND AND BUILDINGS, AND LAND USE. Census of Agriculture, 1997 - Vol. I: Geographic Area Series 1B County-Level Data.

Notes:

For 1870, 1890, 1900 and 1910, values were converted from square miles.

TTOT = Total persons

Source Description:

For 1870-1970, the data is described as:
the total number of females and males.

For 1980, the data is a sum of:
the total number of (white females + nonwhite females + white males + nonwhite males).

For 1990, the data is a sum of:
the total number of (white females under 1 year of age + white females 1 and 2 years + white females 3 and 4 years + black females under 1 year of age + black females 1 and 2 years + black females 3 and 4 years + American Indian females under 1 year of age + American Indian females 1 and 2 years + American Indian females 3 and 4 years + Asian females under 1 year of age + Asian females 1 and 2 years + Asian females 3 and 4 years + other females under 1 year of age + other females 1 and 2 years + other females 3 and 4 years + white females 5 years + white females 6 years + white females 7 to 9 years + black females 5 years + black females 6 years + black females 7 to 9 years + American Indian females 5 years + American Indian females 6 years + American Indian females 7 to 9 years + Asian females 5 years + Asian females 6 years + Asian females 7 to 9 years + other females 5 years + other females 6 years + other females 7 to 9 years + white females 10 and 11 years + white females 12 + 13 years + white females 14 years + black females 10 and 11 years + black females 12 + 13 years + black females 14 years + American Indian females 10 and 11 years + American Indian females 12 + 13 years + American Indian females 14 years + Asian females 10 and 11 years + Asian females 12 + 13 years + Asian females 14 years + other females 10 and 11 years + other females 12 + 13 years + other females 14 years + white females 15 years + white females 16 years + white females 17 years + white females 18 years + white females 19 years + black females 15 years + black females 16 years + black females 17 years + black females 18 years + black females 19 years + American Indian females 15 years + American Indian females 16 years + American Indian females 17 years + American Indian females 18 years + American Indian females 19 years + Asian females 15 years + Asian

Source Description:

For 1900-1910, data is described as:

Urban population (Populations residing in places of 2,500 or more persons).

For 1920-1930, data is described as:

Total urban population.

For 1940 and 1980, data is described as:

Urban population.

For 1950, data is a calculation of:

Total population - (Rural farm population + Rural nonfarm population).

For 1960-1970, data is a calculation of:
(Percent of population, urban) * (Population).

For 1990, data is a sum of:

Persons: (25 to 29 years) + (30 to 34 years) + (35 to 39 years) + (40 to 44 years) + (45 to 49 years) + (50 to 54 years) + (55 to 59 years) + (60 to 64 years) + (65 to 69 years) + (70 to 74 years) + (75 to 79 years) + (80 to 84 years) + (85 years and over).

For 2000, data is described as:

Total population: Urban.

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930-1970, the data is described as:

the total number of females ages 25-29.

For 1980, the data is a sum of:

the white female population ages 25-29 + the nonwhite female population ages 25-29.

For 1990, the data is a sum of:

the total number of (white females 25 to 29 years + black females 25 to 29 years + American Indian females 25 to 29 years + Asian females 25 to 29 years + other females 25 to 29 years).

For 2000, the data is described as:

Female: 25 to 29 years.

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. For 1940-1970, the data is described as:

the total number of females ages 40-44.

For 1980, the data is a sum of:

the white female population ages 40-44 + the nonwhite female population ages 40-44.

For 1990, the data for 1990 is a sum of:

the total number of (white females 40 to 44 years + black females 40 to 44 years + American Indian females 40 to 44 years + Asian females 40 to 44 years + other females 40 to 44 years).

For 2000, the data is a sum of:

Female: 40 to 44 years.

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930, the data is:

the total number of females ages 55-64.

For 1940-1970, the data is a sum of:

the total number of (females ages 55-59 + females ages 60-64).

For 1980, the data is a sum of:

the total number of (the white female population ages 55-59 + the nonwhite female population ages 55-59 + the white female population ages 60-64 + the nonwhite female population ages 60-64).

For 1990, the data is a sum of:

the total number of (white females 55 to 59 years + black females 55 to 59 years + American Indian females 55 to 59 years + Asian females 55 to 59 years + other females 55 to 59 years + white females 60 and 61 years + white females 62 to 64 years + black females 60 and 61 years + black females 62 to 64 years + American Indian females 60 and 61 years + American Indian females 62 to 64 years + Asian females 60 and 61 years + Asian females 62 to 64 years + other females 60 and 61 years + other females 62 to 64 years).

For 2000, the data is the sum of:

the total number of (females 55 to 59 years + females 60 and 61 years + females 62 to 64 years).

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1940-1970, the data is described as:

the total number of females ages 70-74.

For 1980, the data is a sum of:

the white female population ages 70-74 + the nonwhite female population ages 70-74.

For 1990, the data is a sum of:

the total number of (white females 70 to 74 years + black females 70 to 74 years + American Indian females 70 to 74 years + Asian females 70 to 74 years + other females 70 to 74 years).

For 2000, the data is described as:

Female: 70 to 74 years.

Variable Code:

Source Description:

For 1950-1960, the data is described as:
the total number of females age 85 and over.

For 1990, the data is a sum of:
the total number of (white females 85 years and over + black females 85 years and over + American Indian females 85 years and over + Asian females 85 years and over + other females 85 years and over).

For 2000, the data is described as:
the total number of females 85 years and over.

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930-1970, the data is described as:

the total number of males ages 0-4.

For 1980, the data is a sum of:

the total number of (white males ages 0-4 + nonwhite males ages 0-4).

For 1990, the data for 1990 is a sum of:

the total number of (white males under 1 year of age + white males 1 and 2 years + white males 3 and 4 years + black males under 1 year of age + black males 1 and 2 years + black males 3 and 4 years + American Indian males under 1 year of age + American Indian males 1 and 2 years + American Indian males 3 and 4 years + Asian males under 1 year of age + Asian males 1 and 2 years + Asian males 3 and 4 years + other males under 1 year of age + other males 1 and 2 years + other males 3 and 4 years).

For 2000, the data is a sum of:

the total number of (males 0 years + males 1 years + males 2 years + males 3 years + males 4 years).

Variable Code:

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930-1970, the data is described as:

the total number of males ages 5-9.

For 1980, the data is a sum of:

the total number of (white males ages 5-9 + nonwhite males ages 5-9).

For 1990, the data for 1990 is a sum of:

the total number of (white males 5 years + white males 6 years + white males 7 to 9 years + black males 5 years + black males 6 years + black males 7 to 9 years + American Indian males 5 years + American Indian males 6 years + American Indian males 7 to 9 years + Asian males 5 years + Asian males 6 years + Asian males 7 to 9 years + other males 5 years + other males 6 years + other males 7 to 9 years).

For 2000, the data is a sum of:

the total number of (males 5 years + males 6 years + males 7 years + males 8 years + males 9 years).

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930-1970, the data is described as:

the total number of males ages 25-29.

For 1980, the data is a sum of:

the white male population ages 25-29 + the nonwhite male population ages 25-29.

For 1990, the data for 1990 is a sum of:

the total number of (white males 25 to 29 years + black males 25 to 29 years + American Indian males 25 to 29 years + Asian males 25 to 29 years + other males 25 to 29 years).

For 2000, the data is described as:

Male: 25 to 29 years.

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1940-1970, the data is described as:

the total number of males ages 40-44.

For 1980, the data is a sum of:

the white male population ages 40-44 + the nonwhite male population ages 40-44.

For 1990, the data for 1990 is a sum of:

the total number of (white males 40 to 44 years + black males 40 to 44 years + American Indian males 40 to 44 years + Asian males 40 to 44 years + other males 40 to 44 years).

For 2000, the data is a sum of:

Male: 40 to 44 years.

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1910) = Variables #20, 21, 26, 41, 49, 51, 53, 57, 59, 61. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1920) = Variables #8, 9, 29, 39, 49, 50. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1940-1970, the data is described as:

the total number of males ages 55-59.

For 1980, the data is a sum of:

the white male population ages 55-59 + the nonwhite male population ages 55-59.

For 1990, the data is a sum of:

the total number of (white males 55 to 59 years + black males 55 to 59 years + American Indian males 55 to 59 years + Asian males 55 to 59 years + other males 55 to 59 years).

For 2000, the data is described as:

Male: 55 to 59 years.

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1930, the data is:

the total number of males ages 65-74.

For 1940-1970, the data is a sum of:

the total number of (males ages 65-69 + males ages 70-74).

For 1980, the data is a sum of:

the total number of (the white male population ages 65-69 + the nonwhite male population ages 65-69 + the white male population ages 70-74 + the nonwhite male population ages 70-74).

For 1990, the data is a sum of:

the total number of (white males 65 to 69 years + black males 65 to 69 years + American Indian males 65 to 69 years + Asian males 65 to 69 years + other males 65 to 69 years + white males 70 to 74 years + black males 70 to 74 years + American Indian males 70 to 74 years + Asian males 70 to 74 years + other males 70 to 74 years).

For 2000, the data is the sum of:

the total number of (males 65 and 66 years + males 67 to 69 years + males 70 to 74 years).

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1870-1920, the data consists of:

interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

For 1990, the data is a sum of:

the total number of (white males 80 to 84 years + white males 85 years and over + black males 80 to 84 years + black males 85 years and over + American Indian males 80 to 84 years + American Indian males 85 years and over + Asian males 80 to 84 years + Asian males 85 years and over + other males 80 to 84 years + other males 85 years and over).

For 2000, the data is a sum of:

the total number of (males 80 to 84 years + males 85 years and over).

Variable Code:

- IN (1870) = Variables #101, 102, 103, 104, 105, 106. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1880) = Variables #12, 13, 14, 15, 16, 17. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1890) = Variables #32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1900) = Variables #8, 9, 10, 11, 22, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

- IN (1910) = Variables #20, 21, 26, 41, 49, 51, 53, 57, 59, 61. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”
- IN (1920) = Variables #8, 9, 29, 39, 49, 50. Interpolated data for 5-year age-groups created by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level.”

Source Description:

For 1910, the data is the sum of:

the number of (white persons born in Bulgaria + white persons born in Hungary + white persons born in Montenegro + white persons born in Rumania + white persons born in Russia + white persons born in Servia + white persons born in Turkey + white persons born in European Turkey + native white persons with both parents born in Hungary + native white persons with both parents born in Russia).

For 1990, the data is the sum of:

the number of (persons of Czech ancestry + persons of Hungarian ancestry + persons of Lithuanian ancestry + persons of Polish ancestry + persons of Romanian ancestry + persons of Russian ancestry + persons of Slovak ancestry + persons of Ukrainian ancestry + persons of Yugoslavian ancestry).

For 2000, the data is the sum of:

the number of (persons of Czech ancestry + persons of Czechoslovakian ancestry + persons of Hungarian ancestry + persons of Lithuanian ancestry + persons of Polish ancestry + persons of Romanian ancestry + persons of Russian ancestry + persons of Slovak ancestry + persons of Ukrainian ancestry + persons of Yugoslavian ancestry).

Source Description:

For 1890, the data is a sum of:

the number of adherents from the following churches: (Dunkard [Conservative] Church + Friends [Orthodox] Church + Friends [Hicksite] Church + Moravian Church + United Brethren in Christ Church + United Brethren in Christ [Old Constitution] Church).

For 1906, the data is a sum of:

the number of adherents from the following churches: (Brethren German Baptists [Conservative Dunkers] + Brethren German Baptists [Progressive Dunkers] + Brethren, Plymouth, I-V + Friends [Hicksite] + Moravian Church [Unitas Fratrum] + Polish National Catholic Church + Friends [Orthodox]).

For 1916, the data is a sum of:

the number of adherents from the following churches: (Brethren German Baptist Church [Conservative Dunkers] + Brethren German Baptists [Progressive Dunkers] + Brethren, Plymouth, I-V + Friends [Hicksite] + Moravian Church [Unitas Fratrum] + Polish National Catholic Church + Friends [Orthodox]).

For 1926, the data is a sum of:

the number of adherents from the following churches: (Brethren German Baptists [Conservative Dunkers] + Brethren German Baptist Church [Progressive Dunkers] + Friends [3 Bodies] Church + Friends [Orthodox Church] + United Brethren Bodies + United Brethren in Christ).

For 1936, the data is a sum of:

the number of adherents from the following churches: (Brethren [Conservative Dunkers] Church + Brethren [Progressive Dunkers] Church + Church of the Brethren + Evangelical Unity of Bohemian and Moravian Brethren Church + Friends [4 Bodies] Church + Friends [Orthodox] Church + United Brethren in Christ Church).

For 1971, the data is a sum of:

the number of adherents from the following churches: (Brethren in Christ Church + Church of the Brethren + Friends World Committee American Section + Moravian Church in America, Northern Province + Moravian Church in America, Southern Province + Plymouth Brethren + Unity of the Brethren).

Variable Code:

Source Description:

For 1890, the data is a sum of:

the number of communicants or members from the following churches: (Christian Church + Seventh Day Adventist Church + Christian [Christian Connection] Church + Christian Scientist Church + Independent Churches of Christ in Christian Union + Church of God Church + Church of the New Jerusalem [Swedenborgian] + Disciples of Christ Church + Evangelical Association Church + Salvation Army Church + Spiritualist Church + Unitarian Church + Universalist Church).

For 1906, the data is a sum of:

the number of members from the following churches: (Advent Christian Church + Buddhist [Japanese] Temples + Christian Reformed Church + Christian [Christian Connection] Church + Churches of Christ + Churches of God in North America, General Eldership + Church of Christ, Scientist + Church of the Living God + Christ Church + Evangelical Association + Free Christian Zion [Colored] Church of Christ + Non-Sectarian Churches of Bible Faith + Other Bodies + Pentecostal Church of the Nazarene + Other Protestant Churches + Salvation Army + Seventh Day Adventists + Spiritualists + Swedish Evangelical Mission Covenant + Unitarians + United Evangelical Church + Universalists).

For 1916, the data is a sum of:

the number of membership from the following churches: (Advent Christian Church + Seventh Day Adventists + Assemblies of God, General Council + Buddhist Japanese + Christian Church [Christian Convention] + Churches of God [General Assembly] + Churches of God [General Eldership] + Church of the Living God, C.W.F.F. + Disciples of Christ + Evangelical Association + Evangelistic Associations [Apostolic Faith] + Free Christian Zion Church of Christ + Independent Churches + Other Bodies + Pentecostal Church of the Nazarene + Salvation Army + Spiritualist National Association + Spiritualist National Convention + Swedish Evangelical Mission Covenant + Unitarians + United Evangelical Church + Universalists + Churches of Christ).

For 1926, the data is a sum of:

the number of members from the following churches: (Advent Christian Church + Adventist Bodies + Seventh Day Adventist Church + All Other Bodies + Assemblies of God, General Council + Churches of Christ + Church of Christ, Scientist + Church of God + Church of God in Christ + Church of the Living God + Church of the Nazarene + Disciples of Christ Church + Evangelical Church + Evangelical Synod of North America + Evangelical Unity, Bohemian, and Moravian Brethren Church + Federated Church + Salvation Army + Scandinavian Evangelical Bodies + Spiritualist National Association + Unitarians + United Danish Church + Universalists + Volunteers).

For 1936, the data is a sum of:

the number of members from the following churches: (Seventh Day Adventist Church + Members of all other Bodies + Assemblies of God, General Council + Buddhist Mission of North America + Churches of Christ + Church of Christ, Scientist + Church of God + Church of God in Christ + Church of God in North America [General Eldership] + Church of the Nazarene + Disciples of Christ Church + Evangelical and Reformed Church + Evangelical Church + Federated Churches + Christian Reformed Church + Reformed Church in America + Salvation Army + Scandinavian Evangelical Bodies + Unitarian Church + Universalist Church).

For 1952, the data is a sum of:

the number of members from the following churches: (Disciples of Christ churches + Other denominations).

For 1971, the data is a sum of:

the number of adherents from the following churches: (Christian Church[Disciples of Christ] + Christian Churches and Churches of Christ + Christian Reformed Church + Christian Union + Church of God General Conference [Abrahamic Faith] + Church of God [Anderson, Indiana] + Church of God [Cleveland, Tennessee] + Church of the Nazarene + Evangelical Congregational Church + The Evangelical Covenant Church of America + Pentecostal Holiness Church, Inc. + The Salvation Army + Seventh-Day Adventists + Unitarian-Universalist Association + United Church of Christ).

Source Description:

For 1930, the data is described as:

Number of gainful workers. Those with a usual a gainful occupation who were temporarily unemployed and unpaid family farm workers are included.

For 1940 the data is described as:

persons in the labor force who worked for pay or profit, who worked without pay in a family business or farm, or who had a job but were temporarily absent with firm plans to return (including layoff of not more than 4 weeks). Those on public emergency work and those looking for work are excluded from this category.

For 1950 the data is described as:

persons in the civilian labor force who worked for pay or profit, who worked at least 15 hours in a family business or farm, or who had a job but were temporarily absent (including layoffs of 30 days). Those looking for work are excluded from this category.

For 1960 -2000 the data is described as:

persons in the civilian labor force who worked during the reference week (including 15 hours or more of unpaid work in a family business) or who had jobs from which they were temporarily absent. Those on layoff or seeking work are excluded.

For 1990-2000, the data is a sum of:

the number of (males employed in the civilian labor force + females employed in the civilian labor force).

Source Description:

For 1940, the data is the sum of:

the number of (females employed in government + males employed in government)

For 1950, the data is the sum of:

the number of (male government workers + female government workers).

For 1960, the data is the sum of:

the number of (persons employed in agricultural government + Persons employed in non-agricultural government).

For 1970, the data is the calculation of:

(employed percentage in government) multiplied by (number of persons employed).

For 1980, the data is the sum of:

the number of (employed persons by class of workers – Federal government + Employed persons by class of workers – State government + Employed persons by class of workers – Local government).

For 1990, the data is the sum of:

the number of persons classified as (Class of worker: Local government workers + State government workers + Federal government workers).

For 2000, the data is the sum of:

the number of person classified as (Male: All industries except agriculture, forestry, fishing and hunting, and mining: Local government workers + State government workers + Federal government workers) + (Male: Agriculture, forestry, fishing and hunting: Local government workers + State government workers + Federal government workers) + (Male: Mining: Local government workers + State government workers + Federal government workers) + (Female: All industries except agriculture, forestry, fishing and hunting, and mining: Local government workers + State government workers + Federal government workers) + (Female: Agriculture, forestry, fishing and hunting: Local government workers + State government workers + Federal government workers) + (Female: Mining: Local government workers + State government workers + Federal government workers).

Source Description:

For 1930, the data is a sum of:

the number of (other professional and semiprofessional service-females employed + other professional and semiprofessional service-males employed + females employed in other professional and semi-professional service + males employed in other professional and semi-professional service).

For 1940, the data is a sum of:

the number of (females employed in professional and related services + males employed in professional and related services).

For 1950, the data is a sum of:

the number of (females employed in other professional and related service + males employed in other professional and related services).

For 1960, the data is a sum of:

the number of (persons employed in welfare, religious or non-profit work + persons employed in other professional services).

For 1970, the data is a sum of:

the number of (persons employed in welfare, religious or non-profit work + persons employed in the legal, engineering, or miscellaneous professions).

For 1980, the data is described as:

Employed persons by industry – professional and related services, other than health and educational.

For 1990, the data is described as:

Industry: Professional and related services: Other professional and related services. [not health or educational services]

For 2000, the data is:

reconfigured by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Maintaining Historical Consistency of Aggregate Industrial Categories at the County-Level.”

See Technical Paper “A Reconfiguration of Census Tabulations: Maintaining Historical Consistency of Aggregate Industrial Categories at the County-Level.”

Source Description:

For 1930, the data is a sum of:

the number of (persons employed in recreational services + persons employed in hotel or restaurant services + persons employed in laundry services + persons employed in other domestic services).

For 1940, the data is a sum of:

the number of (employed male domestic service workers + employed female domestic service workers + employed male service workers except domestic + employed female service workers except domestic).

For 1950, the data is a sum of:

the number of (male private household workers + female private household workers + male service workers except private household + female service workers except private household).

For 1960, the data is a sum of:

the number of (persons employed in domestic work + persons employed in services).

For 1970, the data is described as:

(employed percentage in services) multiplied by (number of persons employed).

For 1980, the data is described as:

Employed persons by industry – Personal, entertainment, and recreation services.

For 1990, the data is a sum of:

the number of (persons employed in personal services + persons employed in entertainment and recreational services).

For 2000, the data is:

reconfigured by the Great Plains Project. See Technical Paper “A Reconfiguration of Census Tabulations: Maintaining Historical Consistency of Aggregate Industrial Categories at the County-Level.”

Source Description:

For 1930, the data is described as:

the number of persons with a gainful occupation who were out of a job, able to work, and looking for a job.

For 1940, the data is described as:

persons in the labor force seeking work. Note: This definition differs from the that of the census in that it does not include persons on emergency public work.

For 1940, the data is a sum of:

the number of (males 14 years of age and over seeking work + females 14 years of age and over seeking work).

For 1950, the data is described as:

persons in the civilian labor force who were not at work but were looking for work or would have been looking for work except that they were ill, expected to return to work from an indefinite layoff, or believed there was no work in their line.

For 1950, the data is a sum of:

the number of (unemployed males 14 years of age and over + unemployed females 14 years of age and over).

For 1960, the data is described as:

persons in the civilian labor force who did not have a job during the reference week, and who had looked for work in the previous 60 days and were waiting to hear, and persons on layoff.

For 1970-2000, the data is described as:

persons in the civilian labor force who did not have a job during the reference week, and who had looked for work in the previous 4 weeks and were available to accept a job, and persons on layoff.

For 1960-1970, the data is the calculation of:

(percentage of the civilian labor force that is unemployed) multiplied by (number of persons in civilian labor force).

For 1990-2000, the data is a sum of:

the number of (males unemployed in the civilian labor force + females unemployed in the civilian labor force).

A Reconfiguration of Census Tabulations: Population Estimates within 5-Year Age Intervals at the County-Level

Our age data for 1870-1920 required significant programming to be ready for use. The original data from ICPSR are at irregular intervals, such as ages 5-18, 18-55, and 21 and older. Complete data at five-year intervals exist only at the state level. To get an estimation for every five-year age group at the county level, we employ the following solution.

First, we estimate the within-county numbers of males and females within the mutually exclusive and complete age intervals that are implied by the county-level data structure. These are called the “implied” age distributions. Then, we estimate the within-county numbers of male and females in complete five-year age distributions that add up to the state five-year age distribution, under the assumption that age and county are independent *within* overlapping age intervals. As an example, we provide our calculations for 1870 and 1880, which demonstrate our arithmetic assumptions and the programming solution.

Information available:

Age	Males	Females
5-17	CM ₅₋₁₇	CF ₅₋₁₇
18-44	CM ₁₈₋₄₄	CF ₁₈₋₄₄
21+	CM ₂₁₊	CF ₂₁₊
Total	CM	CF

Implied intervals:

Age	Males	Females
0-4	CM ₀₋₄ *	CF ₀₋₄ *
5-17	CM ₅₋₁₇	CF ₅₋₁₇
18-44	CM ₁₈₋₄₄ *	CF ₁₈₋₄₄ *
45+	CM ₄₅₊ *	CF ₄₅₊ *
18+	CM ₁₈₊ *	CF ₁₈₊ *
Total	CM	CF

The entries in the implied distribution are obtained as follows:

Assumption: the ratio of males 0-4 to males 5-17 is the same in the county as in the state.
Then

$$CM_{0-4}^* = (SM_{0-4} / SM_{5-17}) CM_{5-17}$$

and

$$CM_{45+}^* = CM - CM_{0-4}^* - CM_{5-17} - CM_{18-44}^*$$

Assumption: the ratio of females 0-4 to females 5-17 is the same in the county as it is in the state. Then

$$CF_{0-4}^* = (SF_{0-4} / SF_{5-17}) CF_{5-17}$$

and

$$CF_{45+}^* = CF - CF_{0-4}^* - CF_{5-17} - CF_{18-44}^*$$

Note: for the 1870 census, the state age distributions are given in single-year intervals for ages 0-4 and thereafter in five-year age intervals. A separate step is needed to subdivide the 15-19 interval into 15-17 and 18-19. This is the only census (from 1870 to 1920) for which part of the state age distribution can only be obtained by adding up the county age distributions.

A Reconfiguration of Census Tabulations: Maintaining Historical Consistency of Aggregate Industrial Categories at the County-Level

Introduction

Consistent measures are imperative for conducting valid historical analyses. Collected in the long-form survey of the decennial census, employment data has traditionally been tabulated by aggregate industrial category for all counties. Starting in 2000, the industrial coding scheme drastically changed. In response, we develop a methodology to formulate “geographically-sensitive” conversion factors that reconfigure NAISC-based tabulations into long-established SIC categories..¹

Using the Standard Industrial Classification (SIC) to code data for all Census products, the basic structure of the industry classification system has remained generally the same from 1940 to 1990.² However, the Census Bureau took a “fresh slate” approach when implementing the North American Industry Classification System (NAICS) in its coding of data from the 2000 decennial census.³ As the Bureau of Labor Statistics states⁴:

NAICS uses a production-oriented approach to categorize economic units. Units with similar production processes are classified in the same industry. NAICS focuses on how products and services are created, as opposed to the SIC focus on what is produced. This approach yields significantly different industry groupings than those produced by the SIC approach.

Bridging classification systems used in the 1990 and 2000 Censuses, crosswalks have been produced that map detailed occupational and industrial categories across the 1987 SIC and 1997 NAICS. The approach that the Census Bureau takes when creating these crosswalks consists of two methods: the index titles method and double-coded samples. The first method examines the job titles found in the “Alphabetical and Classified

¹ This research has been supported by Grant Number P01 HD045753 from the National Institute of Child Health and Human Development. ⁴ U.S. Department of Labor. Bureau of Labor Statistics. Quarterly Census of Employment and Wages. “Change in Industry Classification Systems.” Last Modified Date: February 26, 2003. <<http://www.bls.gov/cew/cewnaics.htm>>

Indexes of Industries and Occupations” published for the 1990 and 2000 censuses.^{5,6} The second method draws a sample of cases from the 1990 Census for each detailed SIC category and recodes them into a detailed NAICS category. The results are conversion factors consisting of the proportions of a given detailed SIC category which have been recoded to various NAICS detailed categories.

Besides providing these crosswalks to match across detailed categorical systems, the Census Bureau has constructed SF-3 “Templates” which convert aggregate occupational and industrial categories from the 1990 to the 2000 system:

Using these Templates, data users can apply national conversion factors to any 1990 industry or occupation data from SF-3. Data users, however, will have to apply the same conversion factors and distributions to all levels of geography, both sexes, and all other characteristics, even though this is not a perfect method for comparing industry and occupation data in all circumstances. (Scopp 2003, p. 5)

Utilizing and expanding upon these methods developed by the Census Bureau, techniques have been developed to maintain historical consistency of occupational and industrial data for individuals and geographically-specific tabulations (e.g., county-level). One such project is the Public Use Microdata Series (IPUMS). IPUMS has compiled occupation and industry data collected from the 1850 to 2000 U.S. Censuses; all of which are coded within the 1950 SOC and SIC. Two guidelines have been imposed in the production of these data. First the coding of data has strictly adhered to the pre-existing 1950 classification system; whereby no new categories were added to this system as occupations/industries emerged across the timeline. Second, an important decision-rule has been applied in their processing of micro-data collected since 1950. A “plurality of persons” rule reassigns all cases in a given detailed category to the single, largest detailed category (measured by the highest conversion factor).

Prior to the release of the Census Bureau’s technical paper and its associated crosswalks (Scopp, 2003), Deane and Shin (2002) developed a method to adjust aggregate data on “Managerial and Professional Specialty Occupations” from the 1990 Census to better reflect the 2000 coding of “Management, Professional, and Related Occupations”. In so doing, these researchers construct a decision rule determining which of the 60 major groups in the 1990 system should be removed or added to the summary occupational group. In short, this decision rule states that “if the number of persons misallocated was smaller than the number of occupational incumbents correctly reallocated, the reallocation was performed”. (p. 10, Deane and Shin, 2002)

⁵ Scopp, Thomas S. U.S. Census Bureau. 2003. “The Relationship Between the 1990 Census and Census 2000 Industry and Occupation Classification Systems: Technical Paper #65.” Published October 30, 2003.
<<http://www.census.gov/hhes/www/ioindex/pdfio/techpaper2000.pdf>>

⁶ U.S. Census Bureau, Housing and Household Economic Statistics Division. 2004. “Industry and Occupation 2000: Overview.” Last Revised: October 28, 2004.
<<http://www.census.gov/hhes/www/ioindex/overview.html>>

This decision rule was derived from 1990 employment distributions across detailed occupation categories provided by the IPUMS. Since occupational data for the 60 major groups has not been published as a Summary File data product, this methodology is outdated. However, their use of the IPUMS does provide a useful mechanism to capture the composition of aggregate categories as reflected by the IPUMS detailed codes.

Our proposed method directly builds upon the Census' template which converts aggregate industrial categories from the SIC to the NAICS. By constructing "reverse" conversion factors and integrating sub-state 2000 employment distributions (for detailed NAICS categories), we reallocate 2000 county-level tabulations to better reflect the 1990 SIC and contemporary local labor markets. Earlier methods have relied on the "plurality of persons" rule (or some variant) to allocate micro-level and spatial occupational data. Unlike micro-level techniques, we are not trying to assign a specific person (and their associated human capital and income characteristics) to a specific category. Rather we wish to characterize labor markets in the aggregate. Consequently, we can apply all conversion factors so that we may reallocate industry data into multiple categories. Furthermore we use IPUMS data to capture local labor market variability. This approach builds upon both the Census Bureau's and Deane and Shin's methodologies to transform Summary File data.

Proposed Reconfiguration Method: Data Sources, Variable Definitions, and Processing Procedure

The Great Plains Project has compiled industry data collected from the 1880-2000 U.S. Censuses of Population and Housing for select counties in the Great Plains (see Gutmann, et al. 1998 for details). Aggregate industry categories based on the SIC were published for most of this time series. The exception is the 2000 census that uses the NAICS. To maintain consistency of aggregate industry tabulations at the county-level, we wish to redistribute these data to reflect the long-standing SIC system as well as the geographic variability of industrial labor markets.

- 2000 Census of Population and Housing, Summary File-3⁷

Laying the groundwork for our proposed methodology, the Census Bureau has developed and published two documents of particular importance. One of these documents is Table 1 of the U.S. Census Bureau's Technical Report #65.^{8,9} This table provides conversion

⁷ U.S. Dept. of Commerce, Bureau of the Census, and Inter-university Consortium for Political and Social Research. CENSUS OF POPULATION AND HOUSING, 2000 [UNITED STATES]: SELECTED SUBSETS FROM SUMMARY FILE 3 [Computer file]. 2nd ICPSR ed. Washington, DC: U.S. Dept. of Commerce, Bureau of the Census, and Ann Arbor, MI: Inter-university Consortium for Political and Social Research [producers], 2004. Ann Arbor, MI: Inter-university Consortium for Political and Social Research [distributor], 2004.

⁸ Scopp, Thomas S. U.S. Census Bureau. 2003. "The Relationship Between the 1990 Census and Census 2000 Industry and Occupation Classification Systems: Technical Paper #65." Published October 30, 2003. <<http://www.census.gov/hhes/www/ioindex/pdfio/techpaper2000.pdf>>

factors for detailed census industries that redistribute data based on the 1987 SIC into the 1997 NAICS (NCF00_{i,j}). For instance, conversion factors for the SIC-based detailed code ‘agriculture production, crops’ (IND90_i = 010) reallocate a percentage of these jobs to two NAICS detailed codes (IND00_j = 017, 029): ‘crop production’ (96.237%) or ‘support activities for agriculture and forestry’ (3.763%).

IND90_i = 1990 Detailed Census Industry Codes (i),
Based on 1987 SIC

IND00_j = 2000 Detailed Census Industry Codes (j),
Based on 1997 NAICS

NCF00_{i,j} = National Conversion Factors Reallocating Data
From 1990 Detailed Census Industries (i)
Into 2000 Detailed Census Industries (j)

Using these conversion factors to reallocate the 1990 experienced civilian labor force, this table also provides frequency distributions of workers as they fall within the 1990 and the 2000 classification systems (O_ECLF90_i, O_ECLF00_{i,j}).¹⁰

$$(1) \quad O_ECLF00_{i,j} = O_ECLF90_i * NCF00_{i,j}$$

Where:

O_ECLF90_i = Experienced Civilian Labor Force (Collected in 1990),¹¹
Distributed Across 1990 Detailed Census Industries (i)

O_ECLF00_{i,j} = Experienced Civilian Labor Force (Collected in 1990),
Distributed Across 2000 Detailed Census Industries (j)
By 1990 Detailed Census Industries (i)

From these frequency distributions, we estimate a set of “reverse” conversion factors (NCF90_{j,i}) to reallocate data based on the 1997 NAICS into the 1987 SIC. Although the Census Bureau recommends against retrofitting the original conversion factors (p. 5 of Scopp, 2003), we feel that these estimated “reverse” conversion factors are adequate for the task of reallocating aggregate industry data. In order to more accurately covert 2000

[Table 1]

⁹ We are grateful to Matt Sobek of IPUMS for providing the electronic version of this table.

¹⁰ Since the Census Bureau’s and our methodology reallocates only the civilian labor force, industries associated with the Armed Forces have been dropped.

¹¹ The experienced civilian labor force (ECLF) is defined as persons age 16 and over who worked within the previous five years; not including “new workers” (i.e., persons seeking employment for the first time who had not secured their first job).

NAICS data back into the SIC, a sample drawn from the Census 2000 for each detailed NAICS category is required for double-coding and has been drawn. Unfortunately the resulting “reverse” conversion factors will not be made available.¹²

$$(2) \quad O_ECLF00_j = \sum_i O_ECLF00_{ij}$$

$$(3) \quad NCF90_{j,i} = O_ECLF00_{ij} / O_ECLF00_j$$

Where:

O_ECLF00_j = Experienced Civilian Labor Force (Collected in 1990),
Distributed Across 2000 Detailed Census Industries (j)

$NCF90_{j,i}$ = National Conversion Factors Reallocating Data
From 2000 Detailed Census Industries (j)
Into 1990 Detailed Census Industries (i)

The other important document laying the foundation of our methodology is a template produced by the Census Bureau containing crosswalks which redistribute data from aggregate categories based on the SIC to those based on the NAICS.¹³ Information incorporated into this template consists of conversion factors and national employment estimates for detailed categories. These detailed conversion factors coupled with their national employment estimates are compiled within aggregate categories. These “aggregated national” conversion factors are then applied to imported data from STF tabulations.

We expand upon this template by incorporating detailed employment data that captures variability in sub-national labor markets. We use the 2000 Integrated Public Use Microdata Series (IPUMS) to estimate employment distributions of national and sub-national labor markets. Data are drawn from a sample of persons who are members of the experienced civilian labor force. This micro-data file includes information regarding the respondent’s geographic location within super-PUMAs. A super-PUMA (i.e., super public use microdata area) is a geographic area unit (designating by the Census Bureau) with 400,000 or more population within a state.¹⁴

¹² U.S. Census Bureau, Housing and Household Economic Statistics Division. 2004. "Instructions for Creating 1990-2000 Industry Crosswalks, Using Input to the Industry Crosswalk Template." Last Revised: October 28, 2004. <http://www.census.gov/hhes/www/ioindex/pdfio/sf3indtabcross1instructions.pdf>

¹³ U.S. Census Bureau, Housing and Household Economic Statistics Division. 2004. "Template for Converting 1990 Census STF-3 Industry Categories to Census 2000 SF-3 Industry Categories: SF-3 Detailed and 'Quick Tables'." Last Revised: October 28, 2004.
<<http://www.census.gov/hhes/www/ioindex/sf3indcrosstemplate.xls>>

¹⁴ Some states have a total population size that is not large enough to support division into two or more super-PUMAs. These states are: Alaska, Delaware, North Dakota, South Dakota, Vermont, and Wyoming. Washington, DC, also does not have sufficient population for super-PUMA subdivision. The boundaries of super-PUMAs do not span across states.

- 2000 Integrated Public Use Microdata Series (IPUMS), 5% Sample¹⁵

For geographies with fewer than 30 persons in an aggregate NAICS industrial category, estimates of the proportion of that industry category are considered inadequate. For these super-PUMAs, we use state-level distributions (or national-level distributions if necessary) to describe the local industrial market.

As our first step, we sum the national conversion factors that allocate jobs to each of the 17 aggregate SIC categories (e.g., AGF90) for each of the NAICS detailed industry codes. Consequently, we assign the proportion of jobs from a NAICS detailed category that is to be reallocated to an aggregate SIC category ($NCF90_{j,I}$).

$$(4) \quad NCF90_{j,I} = \sum_i NCF90_{j,i}$$

Where:

$IND90_I$ = 1990 Aggregate Census Industry Codes (I),
Based on 1987 SIC

$IND00_J$ = 2000 Aggregate Census Industry Codes (J),
Based on 1997 NAICS

$NCF90_{j,I}$ = National Conversion Factors Reallocating Data
From 2000 Detailed Census Industries (j)
Into 1990 Aggregate Census Industries (I)

Next, we attach these aggregate national conversion factors ($NCF90_{j,I}$) to our IPUMS sample (merging by detailed 2000 industry). Representing the numerator in the calculation of our local conversion factors, we then allocate a percentage of these jobs to an aggregate 1990 category. As for the denominator in our factor calculation, we tally the total number of jobs within each 2000 aggregate category. The formulas for this exercise are as follows:

¹⁵ Ruggles, Steven, Matthew Sobek, Trent Alexander, Catherine A. Fitch, Ronald Goeken, Patricia Kelly Hall, Miriam King, and Chad Ronnander. 2004. *Integrated Public Use Microdata Series: Version 3.0* [Machine-readable database]. Minneapolis, MN: Minnesota Population Center [producer and distributor, <<http://www.ipums.org>>], Extracted August 3, 2004.

$$(5) \quad ECLF90(P)_{j,I} = ECLF00(P)_j * NCF90_{j,I}$$

$$(6) \quad ECLF90(P)_{J,I} = \sum_j ECLF90(P)_{j,I}$$

$$(7) \quad ECLF00(P)_J = \sum_j ECLF00(P)_j$$

$$(8) \quad LCF90(P)_{J,I} = ECLF90(P)_{J,I} / ECLF00(P)_J$$

Where:

$ECLF00(P)_j$ = Experienced Civilian Labor Force (Collected in 2000, IPUMS),
Distributed Across 2000 Detailed Census Industries (j)
For Super-PUMA (P)

$ECLF90(P)_{j,I}$ = Experienced Civilian Labor Force (Collected in 2000, IPUMS),
Distributed Across 1990 Aggregate Census Industries (I)
By 2000 Detailed Census Industries (j)
For Super-PUMA (P)

$ECLF90(P)_{J,I}$ = Experienced Civilian Labor Force (Collected in 2000, IPUMS),
Distributed Across 1990 Aggregate Census Industries (I)
By 2000 Aggregate Census Industries (J)
For Super-PUMA (P)

$ECLF00(P)_J$ = Experienced Civilian Labor Force (Collected in 2000, IPUMS),
Distributed Across 2000 Aggregate Census Industries (J)
For Super-PUMA (P)

$LCF90(P)_{J,I}$ = Local Conversion Factors Reallocating Data
From 2000 Aggregate Census Industries (J)
Into 1990 Aggregate Census Industries (I)
For Super-PUMA (P)

Finally, we attach these geographically-refined conversion factors [$LCF90(P)_{J,I}$] to select counties in the 2000 Census SF-3 file.¹⁶ Described by the formulas below, county-level data based on the aggregated NAICS [$SF00(C)_J$] are re-tabulated to better reflect the SIC [$SF90(C)_I$]. Our tabulations of government employment are not reallocated since data are drawn from the indicator of “class of worker” which is not affected by the NAICS implementation.

$$(9) \quad SF90(C)_{J,I} = SF00(C)_J * LCF90(P)_{J,I}$$

$$(10) \quad SF90(C)_I = \sum_J SF90(C)_{J,I}$$

¹⁶ A single county may fall within the geographic area of more than one super-PUMA. For these cases, an average of the super-PUMA labor-market conversion factors is used (see Appendix D).

Where:

SF00(C)_J = Employed Civilian Population Age 16 and Over
(Collected in 2000, SF-3),
Distributed Across 2000 Aggregate Census Industries (J)
For County (C)

SF90(C)_{J,I} = Employed Civilian Population Age 16 and Over
(Collected in 2000, SF-3),
Distributed Across 1990 Aggregate Census Industries (I)
By 2000 Detailed Census Industries (J)
For County (C)

SF90(C)_I = Employed Civilian Population Age 16 and Over
(Collected in 2000, SF-3),
Distributed Across 1990 Aggregate Census Industries (I)
For County (C)

Data Highlights

Figure-1 presents historical trends in the industrial composition of selected counties in the Great Plains between 1940 and 2000. The 2000 distributions tend to follow an expected pattern. Using our local conversion factors, employment in the agriculture industry decreased, respectively, by 4.65 percentage points between 1990 and 2000. At the same time, the other industries experiencing little proportional change. While government, trade and mining industries shrank by less than 1% (-.72%, -.86%, and -.83%), employment in service and manufacturing industries experienced marginal growth (0.30% and 0.99%).

[Figure-1]

If we did not account for variation in local labor markets, the 2000 distributions would have changed relatively little in the aggregate. Across all industries and counties, estimates varied by less than half of a percentage point between methodologies (0.41% average absolute difference). However there is considerable difference in estimates derived from the two sets of conversion factors when we compare them spatially. Looking at Maps A-E, we see that the national conversion factors sometimes do not adequately capture the industrial composition of local labor markets. Given these spatial patterns, our method seems to improve upon the straightforward application of published national conversion factors.

These methodological discrepancies are especially apparent in the southeastern counties of our Great Plains sample, located in Colorado and New Mexico. In these counties, employment tends to be disproportionately reallocated to service industries rather than into the trades when using our localized estimates. For 7 counties, there is between a 1 to

2% discrepancy in service industry employment. For another 2 counties, this discrepancy increases to 3%.

Meagher County, Montana and neighboring counties of Mahanomen and Becker, Minnesota have agriculture industries with fewer “manufacturing” jobs, compared to the whole national labor market. If we did not account for this unique local market characteristic, up to 5% of these counties’ agriculture jobs would have been erroneously assigned to manufacturing.

Finally, the composition of mining industries seems to be similar for the Great Plains and the nation as a whole with less than a 1 percentage-point difference between estimates.
